Generating a Styled Logo Poster

Foreword

- This course introduces a use case of the Stable Diffusion, IP-Adapter, and ControlNet you have learned about in previous courses.

Objectives

- Upon completion of this course, you will be able to:
  - Generate a logo poster with a unique style using Stable Diffusion, IP-Adapter, and ControlNet.

Introduction

- In this practice, you will generate a logo poster with a unique style using Stable Diffusion, IP-Adapter, and ControlNet. Among them, IP-Adapter is used for image prompts, and ControlNet is used for refined image control.
- Through this practice, you will learn how to apply AI to creative design and generate visual works that comply with a brand image and have an artistic sense.

Choosing a Poster Style

- Use the text-to-image function of Stable Diffusion to generate images in different styles and choose an appropriate style.
- When designing the text-to-image prompt, define a simple solid-color background to highlight style elements and define a simple object to generate for intuitive display.

Defining Contours of the Poster

- Determine the contours to display on the poster, the position of each contour, and the layout of the contours. Generate a contour image using the preprocessing model.
- Generate a preview from the contour image using ControlNet.

Defining Objects of the Poster

- Determine the objects (humans or animals) to display on the poster, the position of each object, and the layout of the objects.
- Generate the object posture using text-to-image, generate a control image using the preprocessing model, and adjust the position of the control image.
- Use ControlNet twice to generate an image.

Controlling the Poster Style

- Use IP-Adapter to control the style of the poster to generate and use ControlNet to generate an image.

Summary

- Procedure:
  - Step 1: Choose the poster style (Stable Diffusion).
  - Step 2: Define the contours (logos) of the poster and generate logos using ControlNet.
  - Step 3: Define the objects (such as humans) and combine them with logos to generate an image using ControlNet.
  - Step 4: Control the poster style (IP-Adapter)
